DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 10 recites the limitation "the corner" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102/103

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 9-17 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over USPN 3,700,857 to Brandes et al.

Application/Control Number: 09/719,118

Art Unit: 1775

Brandes discloses a resistance heater comprising electrically insulating refractory material, such as alumina and zirconia, which are coated with a certain thickness thin film of an electrically conducting material such as any transition metal elements such as platinum and nickel (see col. 2, lines 24-68 and patented claims). The process of coating the insulating particles may be by any conventional coating or plating technique, such as electroless plating (see col. 3, lines 1-4). The particles are used as a powder (see col. 3, line 14). The coated particles are compacted, such as pressing and electrophoresis (see col. 3, lines 15+), and are heated to a temperature to effect sintering of the powders (see col. 3, lines 33-34). These metal coated particles sited by Brandes inherently possess excellent electrical conductivity and heat. Brandes further describes with the use of a pair of electrodes in a laminated layer wound around the electrically insulating coated particles coated with a thin layer of electrically conductive material will inherently allow the passage of current through the electrodes and may be applied to any shaped body (see col. 3 line 60-col. 4, line 3 and Figure 2). No patentable distinctions are seen.

- 6. Under 35 U.S.C. 103(a), in addition, the presently claimed temperature sensor would obviously have been present once the Brandes product is provided. Note *In re Best*, 195 USPQ 433, footnote 4 (CCPA 1977), as to the providing of this rejection made above under 35 U.S.C. § 102.
- 7. Claims 9-17 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 4,659,960 to Toya et al.

Toya discloses various embodiments of a spark plug (temperature sensor) comprising an electrode element (carrier) of a metal oxide, carbide, or nitride powders, (such as zirconia, silicon nitride, or titanium carbide) coated with a noble metal, where an electrode axis (conductor track)

Art Unit: 1775

of nickel or precious metals such as platinum covers the surface of the electrode element embedded in a laminated structure (see col. 2, line 46 – col. 3, line 6; Figures and patented claims). The process utilized may employ various coating techniques including chemical and physical vapor deposition processes (see col. 3, lines 7-35; col. 3, lines 65+; col. 4, lines 25+). No patentable distinctions are seen.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. DE-196 36 493 to Brinz et al. discloses a substrate seeded with a powder noble metal salt coated with a metal bound chemically to a substrate and its process.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tamra L. Dicus whose telephone number is (703) 305-3809. The examiner can normally be reached on Monday-Friday, 7:00-4:30 p.m., alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (703) 308-3822. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 746-8329 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
